- **Nov. 19:** Evaluating Risk Management Alternatives via RightRisk Analytics [Register](#)

More [detailed descriptions](#) are below.

[SUBSCRIBE TO OUR EMAIL NEWSLETTER](#)

The University of Nebraska-Lincoln's Department of Agricultural Economics' Farm and Ranch Management team is presenting a series of webinars focusing on management, profitability, economic outlook and farm survival.

The live webcasts will cover topics and issues relevant to producers and communities in the state. They will be presented by experts from across the country and include time for questions and answers.

The free webinars will be held on Zoom and will run for approximately one hour. Registration is open to everyone until the start of each session (see schedule below).

Additional webinars are expected to be announced.

Additional information, a schedule of upcoming webinars and recordings of each session will be available on this page.

Upcoming Webinars

Thursday, Nov. 19, noon

With:

- John Hewlett, ranch/farm management specialist, University of Wyoming
- Jay Parsons, professor and farm and ranch management specialist, University of Nebraska-Lincoln

Evaluating risk management alternatives can be challenging, especially without the right tools. The RightRisk Education Team has been working for nearly 20 years to develop the right tools to assist managers of agricultural operations to make the best decisions, even when the information at hand is incomplete or difficult to interpret. The team has built numerous tools to assist managers to sift through the information available and alternative management strategies to identify those that have the best chance of moving them and their operation towards their goals. This presentation will explore the tools currently available and the general approach followed for each. Specific decision examples will be demonstrated including a look at the effect LRP insurance can have on projected revenue.
