

THURSDAY

CASE INSIGHT

Screening Alone Is Sometimes Enough.

The Risk Mitigation Filter (RMF) helps you decide if a situation can be addressed with screening alone — or if a deeper analysis is needed.

Complete the
Risk Mitigation Filter
(RMF)

Filter OK

- Risks appear manageable
- No automatic escalation triggers
- You can move forward with your planned next step

Further Review Needed

- One or more escalation triggers:
 - Extreme (E) costs, or
 - High failure consequence
- Use a deeper RightRisk tool:
 - Risk Scenario Planner (RSP)
 - Multi-Temporal Risk Analysis (MTRA)
 - RDFinancial

Different decisions require
different depths of analysis.

*A structured approach
for your operation.*
