CASE EXAMPLE

# No Fence, No Turnout?

After a wildfire, producers face tough decisions about when and how to return cattle to the landscape.

## THE CHALLENGE

Fire destroyed 2.1 miles of interior allotment fence, and the burned unit required rest for a full growing season.

## THE ANALYSIS

The Risk Mitigation Filter (RMF) identified key risks and pointed to a deeper analysis using the Risk Scenario Planning (RSP) Tool.

## TRIAL

A 90-day virtual fencing trial was the recorded outcome, with a mapped exclusion boundary, monitoring plan, and cattle-removal strategy on breach, per agency requirements.
