TUESDAY

RISK MITIGATION FILTER

What the Ratings Ask You to Judge

Each rating addresses a different question about fit, risk, feasibility, cost, consequence, and next steps.

Problem Fit

How well the alternative addresses the management problem.

Risk Source

Which source of risk is most involved: Market, Production, Institutional/Legal, Human, or Financial.

Control Type

How the alternative responds to risk: Avoid, Reduce Probability, Reduce Consequence, Transfer, Increase Capacity, or Accept.

Feasibility

Whether the alternative can be carried out given infrastructure, labor, legal/institutional conditions, animal management, and contingency needs.

Up-front Cost

The one-time commitment required to put the alternative in place.

Recurring Cost

The continuing cost required to keep the alternative in use.

Failure Consequence

What happens if the alternative fails or does not perform as intended.

Next Step

Whether screening is enough, or the alternative routes to a deeper tool or specialist review.

The filter is a routing step, not a winner-picking score.

EIGHT CRITERIA:
ONE FILTER. DIFFERENT QUESTIONS.

A decision-support resource.
Not a technology explainer.
Not an adoption guide.
