THURSDAY
ANALYSIS DEPTH

The Multi-Temporal Risk Analyzer

MTRA helps compare alternatives when costs, benefits, and risks unfold over multiple years.

WHAT IT DOES

Evaluates the financial consequences of alternatives over time, carrying expected changes in costs, benefits, and risks forward for up to 20 years.

WHAT IT SHOWS

Projected cash flows and present value for each alternative under different cost and timing assumptions, with a range of possible outcomes.

WHEN TO USE IT

When the Risk Mitigation Filter indicates that further analysis is needed, such as for alternatives with higher or recurring costs, or when impacts extend beyond a single year.

KEY TAKEAWAY

MTRA supports comparisons of alternatives and next steps. It does not dictate a single decision.

Different decisions justify different depths of analysis.
